

The platform is - <https://dharamik-platform--bug-fixes-84aka2gd.web.app/#/>
(login as user - email: vaxilo9665@herrain.com
password: dharamik-vvhh-5854)

admin side is - <https://dharamik-admin--bug-fixes-8yj7g449.web.app/#/>
login at - dharamikapp@gmail.com
Password - Dharamik@123!

The purpose of the platform is to give signals(quick messages), news, videos, notifications, segments info etc
to our students who are our members, our platform is categorised based on the memberships and all the content is sent
to users based on membership type, the memberships are also having levels where 0 level means the lowest one and 10 means
the highest one with highest features, the content is completely on admins.

CHANGES, BUG FIXES, FEATURES, UI IMPROVEMENT REQUIRED

User Side (PC view) -

- 1- On dashboard - The sengmet images are not working
- 2 - notifications are not making sound an animation like singals
- 3- Adding Rss feed in news section
- 4- in premium signals section - the user's unique code is not responsive properly and not showing on complete screen
- 5- video sessions - Videos should be shown as per the category and ratings counter should work
- 6 -Improving UI of contact us section (text allignemnt only for now)
- 7 - Doubts are not getting posted and doubts should get posted from user side and shown to admin first, after admin reply
on that doubt it should be visible to the faq menu in doubt section (The logic is already built it is having sonme error)
- 8 - User section - On profile icon, the image editing option (the option was there before but it is not here due to some error)
- 9 - User section - Membership button before saved button, this button will show all the memberships in the platform
higher level memberships will be shown to upgrade and lower level membership will show option "Buy" and it will be done
using razorpay or any other indian payment gateway on the platform.

for both mobile and pc - Signlas section - the images in signals section should have more bigger size like we send it on
telegram or whatsapp or should have dynamic size, the links in singals should have blue color in their text, as of now
the links are sent from admin panel using <link> tag.

Minimizing the assents and sections using high resources in order to improve the speed of platform.

User section (Mobile view)

- 1- Generating Apk for mobile - which will basically run this web app in mobile view as the mobile version is already developed
we also need you to put a feature in that apk which will disable the screenshot of the app.

- 2 - In mobile version the notification red icon is not dynamic, it is not getting changed when we see the notification fix that
- 3- The videos are not getting played for ios users when they visit in their iphones
- 4 - The contact us section is not responsive as per the mobile sizing (alignment issues)
- 5 - The middle most button with logo and white border - it should show white dot indication whenever there is new signal to watch and after user opens that window it should vanish.

Admin side -

- 1. While adding the user from add user option the user's unique code should be visible in a text field with its unique value by default so that if admin wants to change it, he can do it.
- 2. The by default choose membership option is "One million" as of now, it should be the last used membership by admin for all the places wherever this choose membership is getting used.
- 3. Dashboard will be renamed to "Home" in both the places user side and admin side and on admin side Dashboard will be a new section and will have buttons to access all the buttons which are currently in the menu and there will be a quick signals button which will allow us to send the signals quickly which is feature of signal broadcast currently.
- 4. The news section will have the Rss feed adding option and it will have the existing one as it is.
- 5 - Fix the doubt section as it will post the doubts to user side once the admin reply on some doubt or creates a doubt with answer.
- 6 -The user section should have an email field where if admin clicks on user's name, the email will be visible in that box, as it is happening in manage memberships as when we click on edit option it shows the email of the user.

These all are the basic, logical and UI related fixes on both admin and user side, if there will be any minor UI changes occurs with the development that will be shared at that time.
